

6.005 Team Contract

Brandon Sanchez (bsanchez)

Eric LaCava (elacava)

Pranam Chatterjee (pranam)

11/23/2015

Goals

- Make an A on the project
- Implement the project as SIMPLY as possible
- Have a finalized draft 2-3 days in advance, and spend the rest of the time improving the code, and commenting
- Everyone needs to make every meeting
- Everybody needs to deliver on their deadlines without taking late days

Meetings

- In-Class meetings will be solely used for code-review and group fixing. The bulk of the implementation will be done in evening meetings.
- We will meet in Hayden Library Study Rooms in the evenings (especially Tuesday and Thursday)
- Difficult sections of code will be done in pair programming
- More simplistic operations can be done individually but with communication
- Communicate in advance if decided meeting times do not work
- Main means of communication will be a Facebook group
- Eric and Pranam will work together on campus during Thanksgiving break, and will be in communication with Brandon

Work

- Everyone will contribute to all parts of the project
- Code reviewing can be done individually, but the actual changing will be done in our meetings
- For each commit, we will indicate contributions

Decision-Making

- Try to achieve a consensus on the issue needing a decision
- If no consensus can be reached, the group will take a vote and the majority will make the decision
- Be good with communication but small decisions can be made individually with a note for the other members.
